

Montage/Collage Project

Image #1 - Alter an image using only the components in the single picture to visually change the photograph. You may eliminate aspects of the image but you can not add things from another image. Print the original and the new image.

Image #2 - Use any combination of images to make a realistic looking photograph. Please use multiple photographs or images to achieve this. The images can be from any source. Print

Image #3 - Composite an image using any images at your means. This one doesn't have to be realistic but should be photographic. Print

Bring all four images to class.
